

Principles of Applied Ecology

LA 441/541 • 4 Credits

Fall 2015 • Tu/Th 1:00 pm - 3:50 pm • 231 Lawrence Hall

Bart Johnson • Department of Landscape Architecture • University of Oregon
Office hours: Thurs. 10-12 (or by appt.) • 209 Pacific • tel. 346-2235 • email: bartj@uoregon.edu

Prerequisites: Undergrad: 1 course in ecology or biogeography. Grad: 1 course in natural sciences.
Contact the instructor or Chad Bush for a list of qualifying prerequisite courses.

Non-majors should contact the Landscape Architecture office at 346-3634 for permission to enroll

Course Objective:

By the end of the course, the student should be able to apply ecological understanding toward landscape design, planning and management interventions across a range of spatial scales and land-use contexts using concepts and techniques developed in class.

Overview:

The primary goal of this course is to develop skills in the application of ecological principles to spatially based landscape design, planning and management. To this end, we will develop an ecological framework for understanding landscape processes that draws from both ecology and design to integrate human needs with those of other species. Over the course of the quarter, we will:

- Draw from selected subdisciplines of ecology to explore different ways of understanding landscapes: as communities, as pattern and process, as living systems, and as spatial and temporal hierarchies
- Learn key ecological concepts and apply them to design, planning and management problems
- Consider how the interactions of landscape structure and function create dynamic ecosystems that change over time, and explore how to incorporate ecological processes in their management
- Apply an understanding of the life history needs of native plants and animals toward design, planning and management within a multi-species framework
- Develop a toolbox of concepts and techniques that can be applied across a range of spatial and temporal scales and a variety of land uses, from residential properties to watersheds, and from urban cores to nature reserves
- Build a working knowledge of how to apply ecological theory and methodologies to spatially-based problem-solving by reading and interpreting the literature, exploring scientific approaches to answering questions, examining case studies, and applying ecological approaches

Course Mechanics:

The course will meet twice per week. The first two periods (1:00-2:50) will focus on the presentation and discussion of class materials. The final period (3:00-3:50) will serve as a lab, and may include instruction, class exercises or time for teams to work on class projects. Classes will encompass a variety of learning formats from lectures to guided in-class exercises, discussions of ecological literature, and outdoor field exercises. ***Students are required to participate in a full-day field trip, scheduled for Saturday 10/17.*** Students unable to attend the field trip must clear it in advance with the instructor and perform an equivalent make-up assignment. ***Final Project presentations will be held during the final exam period, Thurs., Dec.10, 12:30-3:00 PM; all students must attend.***

Textbooks and other readings

The required texts:

Dramstad, W.E., J.D. Olson and R.T.T. Forman. 1996. Landscape ecology principles in landscape architecture and land-use planning. Washington, D.C.: Island Press. Available as hard copy or e-book.

A course reader and a course packet will be available at the UO Bookstore.

The optional texts:

Johnson, B. R. and K. Hill. 2002. Ecology and design: frameworks for learning. Washington, D.C.: Island Press. Available as hard copy or e-book. *There are three required chapters for all students, one individualized chapter to read, and others that may be of interest. You may purchase the book if you wish to have the entire set of readings. However, the three required chapters are available on Blackboard and the individualized chapter may be copied from the AAA Reserve copy of the book.*

Forman, R.T.T. 1995. Land mosaics: the ecology of landscapes and regions. Cambridge: Cambridge University Press.

Evaluation

Final project presentations will occur during the final exam period. Each student must attend class for presentations on that day.

The course is offered as either graded or pass/no pass. In either case, all assignments must be completed satisfactorily and submitted in a timely fashion to achieve a passing grade. Grades will be based on both individual performance and team projects. The written reading assignments count as a single assignment, and you must receive a minimum of 65% to pass that component. Students will be expected to attend all classes and be on time, including the field trip. On-time class attendance counts for 10% of a student's grade. More than two unexcused absences will result in further deduction of points.

Throughout much of the quarter, students will work in teams of 4-5 people that will serve as the basis for performing in-class exercises, small-group discussions, and the final project. Students will develop team covenants and conduct a mid-project peer evaluation to help develop good team dynamics. At the end of the quarter, students will be asked to provide a final peer evaluation of the relative contributions of their team members.

The university requires that graduate students fulfill requirements beyond those of undergraduates in 400/500 level courses. To this end, graduate students will be asked to complete additional reading assignments, and to exercise leadership in class sessions and team projects.

Policy Statement on Academic Honesty

All work submitted in this course must be your own (or your own team's) and originally produced for this course. The use of sources (ideas, quotations, paraphrases) must be properly acknowledged and documented. Students are encouraged to work together and assist one another, but unless an assignment is specifically assigned as a team project, each student is expected to complete their own work individually. See the UO guide to avoiding plagiarism:
<http://libweb.uoregon.edu/guides/plagiarism/students/>.

For the consequences of academic dishonesty, refer to the Schedule of Classes published quarterly. Violations will be taken seriously and are noted on student disciplinary records. If you are in doubt as to the requirements or the nature of specific projects in this regard, please do not hesitate to contact the instructors before you complete the project/activity in question.

Information for Students with Disabilities

The University of Oregon is working to create inclusive learning environments. If there are learning or health considerations that may affect your ability to participate fully in this course, please meet with Prof. Johnson as soon as possible to discuss possible accommodations. If this is a documented disability, please request that the Counselor for Students with Disabilities send a letter of verification.
