As of February 20, 2015 Professor Rob had only just been assigned to teach this studio. He is working at identifying the best possible project for the class.

He has looked at more than twelve projects from among those for which he has recently received project requests -- from landowners and agencies around our region. The projects that are still in the running are:

- Keiser shipyard historic waterfront park in Vancouver, Washington;
- site plan for a senior living and extended care campus in Gresham, Oregon;
- trail and stairway plan up and down Marquam Hill between the two campuses of Oregon Health Sciences University;
- viewpoint and interpretive waysides along Terwilliger Parkway, Portland;
- one or two large-scale neighborhood parks on empty sites in Bend, Oregon;
- replacing the Millrace on the U.O. campus;

Regardless of the project, this studio will emphasize technical site analysis, historical site analysis, drafting, 3-D modeling and/or photo-simulation as tools in designing and graphic communication.

If you have a preference email Rob asap.
